Allowable Subject Matter

Claims 1-20 are allowed.

The following is an examiner's statement of reasons for allowance:

With respect to claim 1, the prior art does not teach or fairly suggest a method including

the step of rebinning the projection data set from a first geometry to a second geometry, resulting

in a first rebinned projection data set, a second radial resolution of the first rebinned projection

data set in the second geometry is higher than a first radial resolution of the projection data set in

the first geometry; and rebinning the first rebinned projection data set from the second geometry

to a third geometry, resulting in a second rebinned projection data set, when taken in

combination with the other limitations of the claim. Claims 2-8 are allowed by virtue of their dependency.

With respect to claim 9, the prior art does not teach or fairly suggest a device including a data processor, the data processor is adapted for performing the following operation:

rebinning the projection data set from a first geometry to a second geometry, resulting in a first rebinned projection data set, wherein a second radial resolution of the first rebinned projection data set in the second geometry is higher than a first radial resolution of the projection data set in the first geometry; and

rebinning the first rebinned projection data set from the second geometry to a third geometry, resulting in a second rebinned projection data set, a third radial resolution is higher than the first radial resolution of the projection data set in the first geometry, when taken in combination with the other limitations of the claim. Claims 10 and 15-16 are allowed by virtue of their dependency.

With respect to claim 11, the prior art does not teach or fairly suggest a system including a data processor, the data processor is adapted for performing the following operation:

rebinning the projection data set from a first geometry to a second geometry, resulting in a first rebinned projection data set;

a second radial resolution of the first rebinned projection data set in the second geometry is higher than a first radial resolution of the projection data set in the first geometry; and rebinning the first rebinned projection data set from the second geometry to a third geometry, resulting in a second rebinned projection data set, a third radial resolution is higher than the first radial resolution of the projection data set in the first geometry, when taken in combination with the other limitations of the claim. Claims 12 and 17-18 are allowed by virtue of their dependency.

With respect to claim 13, the prior art does not teach or fairly suggest a computer readable storage medium encoded with compute executable instructions when executed by a processor causes a processor to perform the following operation:

rebinning the projection data set from a first geometry to a second geometry, resulting in a first rebinned projection data set, wherein a second radial resolution of the first rebinned projection data set in the second geometry is higher than a first radial resolution of the projection data set in the first geometry; and

rebinning the first rebinned projection data set from the second geometry to a third geometry, resulting in a second rebinned projection data set, wherein a third radial resolution is higher than the first radial resolution of the projection data set in the first geometry, when taken in combination with the other limitations of the claim. Claims 14 and 19-20 are allowed by virtue of their dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue Application/Control Number: 10/598,866

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

 The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kachelriess et al. ("4D Reconstruction for Wide Cone-Angle Medical CT", October 2003, 2003 IEEE Nuclear Science Conference Record, Volume 5, Pages 3248-3254) discloses rebinning the projection data set from a first geometry to a second geometry, resulting in a first rebinned projection data set and rebinning the first rebinned projection data set from the second geometry to a third geometry, resulting in a second rebinned projection data set, the radial resolution of the second rebinned projection data set in the third geometry is higher than a first radial resolution of the projection data set in the first geometry and/or second geometry (Pages 3250-3251, Section IV. Reconstruction).

Hsieh (US 5,265,142) discloses interleaving two projection into one projection where the first and second projections are obtained by wobbling a focal spot (Abstract and Figures 4-5).
